To whom it may concern:

My name is Melissa King and I am a software development manager at Orion180 Insurance, and I would like to provide a letter of recommendation for Ryan Coveny for a junior software developer role. Ryan worked on my team for about 3 months as a part of an application stabilization project, but he had previously worked on an adjacent team for about 7 months. During Ryan's time at Orion180, he had the opportunity to work in almost all areas of our application, especially on his first team. While working with that group, Ryan became the team's go-to bug swatter: when a new bug landed on the team board, and the senior developers were at capacity, Ryan would be the one to pick up the bug, document the behavior, troubleshoot the issue, and report back his findings before anyone else had time to take a look. The bug fixes that Ryan worked on ranged from back-end database changes and data updates to front-end component repair and UI validation changes. Ryan's detail-oriented nature makes him a highly capable debugger, and he writes thoughtful, clear documentation of root causes and proposed fixes.

After a team restructuring, Ryan was transferred to work under me on a new team dedicated to improving application stability and performance. During the time he spent on my team, Ryan was tasked with analyzing current internal tools and solutioning an improved structure for generating database update scripts. His improvements to the script generation structure allowed the team to implement multiple schema changes that allowed for better change ownership and visibility in the affected tables. Additionally, Ryan acted as the team expert on a specific product line that his previous team had worked on extensively when our team was tasked with making specific data updates to improve performance and throughput of the product. His prior knowledge and documentation of the product line allowed the rest of our team, who had little experience working in that area of the application, to catch up and make worthwhile changes that fit properly in the existing product flow.

Unfortunately, Ryan's time at Orion180 was cut short by a round of position eliminations, which affected the majority of our onshore development staff. If given the opportunity, I would rehire Ryan for the same role as he was a valuable member of our team. Ryan is highly detailed, precise, and careful in his work. He is a coachable team member who will accept responsibility and take pride in the code he writes, and he is agile in a rapidly changing environment. I would recommend Ryan for a junior software development role in an agile team setting and I believe that he has a bright future ahead of him.

Thank you,

Melissa King
Manager, Software Development at Orion180 Insurance
