Experience

Junior Software Developer *Melbourne, FL*
Orion180 Insurance Services *January 2026 – November 2026*

- Implemented and debugged bugs and features for My180, Orion180's policyholder and agent facing web application.
- Built upon the app's Vue.js front-end, C#, .NET, and Entity Framework back-end, and MSSQL database.
- Learned the app's APIs and microservices, integrated into the company's fast growing, collaborative Agile environment.

Freelance Software Engineer, Customer Service Staff *Vero Beach, FL*
Joey and Kimmy's Seafood Market and Restaurant *May 2023 – December 2025*

- Spearheaded the development of a full-stack Electron.js web application that streamlined restaurant operations.
- Rebuilt the company's business cards from scratch in Adobe Photoshop after original files were lost.
- Enhanced people skills by adopting the best practices in customer service, cooks, and waitstaff.

Education

University of Florida *July 2021 – May 2025*
Bachelor of Science in Computer Science, Minor in Digital Arts and Sciences GPA: 3.7/4.0

- **Dean's List:** Spring 2023, Spring 2024, and Fall 2024
- **Coursework:** Enterprise Software Engineering, Software Verification and Testing, Database Systems, Operating Systems, Data Structures and Algorithms, Intro to Machine Learning, Natural Language Processing

Projects

Restaurant Label Printer Application | *Java, React.js, Apache Spark, Electron.js, MySQL, JSON, Jackson*

- Developed a full-stack Electron.js app used by local restaurant staff to print and organize takeout label data.
- Built a responsive React.js front-end backed by a Java server managing object data for both JSON and SQL.
- Used Apache Spark as a custom API layer for smooth communication between the front-end and back-end.

Full-Stack PokéAPI Team Builder | *React.js, Web APIs, Google Firestore, OOP*

- Built a full-stack web application for designing Pokémon teams connected to an open-source RESTful web API.
- The back-end uses OOP to structure consumed API data; the front-end delivers a clean, user-friendly display.
- Deployed on GitHub Pages with team display, data search and filtering, plus Google Firestore team storage.

CaSMM Research Project | *React.js, Agile-Scrum, PostgreSQL, Docker*

- Acted in a six-member Agile-Scrum team developing React.js resources for the CaSMM research project.
- Planned and built the front-end React.js interface and styling for the student and teacher assignment views.

Loan Approval Prediction Application | *Python, Agile-Scrum, Jupyter, Pandas, Keras, Tensorflow, Matplotlib*

- Led a five-person Agile-Scrum team to create a machine learning application predicting loan approval odds.
- Implements Neural Networks, Logistic Regression, KNN, SVM, Decision Trees, and Ensemble Learning Methods.

Involvement

Front-end Developer for Society of Software Developers' Website | *React.js, Agile-Scrum*

- Collaborated in a seven-member Agile-Scrum team to develop the organization's website at ufssd.org.
- Designed and constructed website home page and continuously managed project dependencies.

Front-end Developer for Open Source Club's Echologator Project | *React.js, Typescript, Google Firestore*

- Joined the development of a Firestore back-end open source proximity-based chat application, Echologator.
- Aided the development of the application's front-end chat communication and user profile display.

Technical Skills

Languages: JavaScript, Typescript, HTML, CSS, Java, SQL, Python, C++, C#, C, PHP, R

Technologies: Git, Version Control, Agile Methodology, React.js, Vue.js, Express.js, Node.js, MySQL, MariaDB, .NET, Google Firestore, REST APIs, Tailwind, SignalR, Electron.js, Docker, Kubernetes, Apache Spark, Microsoft 365
